School vs. college

- Do not assume that they are similar because they are not.

School vs. college

- Do not assume that they are similar because they are not.
- First of all, the size of your class will be much bigger. There should be about 100 students in most of your first-year modules (including Mathematics, Theoretical Physics and also TSM students).

School vs. college

- Do not assume that they are similar because they are not.
- First of all, the size of your class will be much bigger. There should be about 100 students in most of your first-year modules (including Mathematics, Theoretical Physics and also TSM students).
- The material introduced will be more difficult to grasp. You will not be able to understand everything by simply attending lectures. Normally, at least twice the time you spend in class should go into homeworks and self-study.

School vs. college

- Do not assume that they are similar because they are not.
- First of all, the size of your class will be much bigger. There should be about 100 students in most of your first-year modules (including Mathematics, Theoretical Physics and also TSM students).
- The material introduced will be more difficult to grasp. You will not be able to understand everything by simply attending lectures. Normally, at least twice the time you spend in class should go into homeworks and self-study.
- You ended up here because you did well in secondary school, but you are not going to do well here just because you ended up here.

School vs. college

- Do not assume that they are similar because they are not.
- First of all, the size of your class will be much bigger. There should be about 100 students in most of your first-year modules (including Mathematics, Theoretical Physics and also TSM students).
- The material introduced will be more difficult to grasp. You will not be able to understand everything by simply attending lectures. Normally, at least twice the time you spend in class should go into homeworks and self-study.
- You ended up here because you did well in secondary school, but you are not going to do well here just because you ended up here.
- The teaching approach will be different and it will take some time to adjust. You will need to understand the material and frequently argue with proofs. In particular: just memorising some basic facts will not usually help!

Lectures vs. tutorials

- Most first-year modules include 3 lectures per week. Those are meant to introduce new material and they are attended by all students.

Lectures vs. tutorials

- Most first-year modules include 3 lectures per week. Those are meant to introduce new material and they are attended by all students.
- You will also have 1 tutorial per week for most modules. Tutorials are problem solving classes for smaller groups of students. They will give you the chance to work on some practice problems, to ask questions about various concepts and to collaborate with other students.

Lectures vs. tutorials

- Most first-year modules include 3 lectures per week. Those are meant to introduce new material and they are attended by all students.
- You will also have 1 tutorial per week for most modules. Tutorials are problem solving classes for smaller groups of students. They will give you the chance to work on some practice problems, to ask questions about various concepts and to collaborate with other students.
- We are not very likely to take attendance in class. However, tutorials are very important for learning and you should always attend them. You need to work on some practice problems regularly. Most of the students who fail are students who do not attend their tutorials.

Lectures vs. tutorials

- Most first-year modules include 3 lectures per week. Those are meant to introduce new material and they are attended by all students.
- You will also have 1 tutorial per week for most modules. Tutorials are problem solving classes for smaller groups of students. They will give you the chance to work on some practice problems, to ask questions about various concepts and to collaborate with other students.
- We are not very likely to take attendance in class. However, tutorials are very important for learning and you should always attend them. You need to work on some practice problems regularly. Most of the students who fail are students who do not attend their tutorials.
- Tutorials start during the second week of classes. They do appear in your timetable, but they are meant to start a week later.

Fresh vs. sophister

- The degree is divided into two parts, two freshers (or fresh) years and two sophister years.

Fresh vs. sophister

- The degree is divided into two parts, two freshers (or fresh) years and two sophister years.
- **Fresh years.** Most modules are mandatory during the first two years. These years are designed to introduce the background needed to study all kinds of topics. Students are allowed to fail 1-2 modules, as long as their marks in these modules are not particularly low.

Fresh vs. sophister

- The degree is divided into two parts, two freshers (or fresh) years and two sophister years.
- **Fresh years.** Most modules are mandatory during the first two years. These years are designed to introduce the background needed to study all kinds of topics. Students are allowed to fail 1-2 modules, as long as their marks in these modules are not particularly low.
- **Sophister years.** During the last two years, students get to choose their own modules based on their interests and future plans. There is a large selection of modules including maths education, statistics and various theoretical/applied maths modules. Students are allowed to fail 1-2 modules, as long as their marks in these modules are not particularly low.

Fresh vs. sophister

- The degree is divided into two parts, two freshers (or fresh) years and two sophister years.
- **Fresh years.** Most modules are mandatory during the first two years. These years are designed to introduce the background needed to study all kinds of topics. Students are allowed to fail 1-2 modules, as long as their marks in these modules are not particularly low.
- **Sophister years.** During the last two years, students get to choose their own modules based on their interests and future plans. There is a large selection of modules including maths education, statistics and various theoretical/applied maths modules. Students are allowed to fail 1-2 modules, as long as their marks in these modules are not particularly low.
- About half of the sophister modules are offered every year and about half of them every other year. The overall mark that will eventually appear on your degree is based solely on your sophister marks.

Homeworks

- The marking policy for most modules is roughly 80% for the annual exam and 20% for homework. There is usually a correlation between homework scores and exam performance.

Homeworks

- The marking policy for most modules is roughly 80% for the annual exam and 20% for homework. There is usually a correlation between homework scores and exam performance.
- You are allowed to collaborate on homework, but need to write up your own solutions. Plagiarism may lead to administrative sanctions. Late homework is not usually accepted. In fact, solutions may be posted online

- The marking policy for most modules is roughly 80% for the annual exam and 20% for homework. There is usually a correlation between homework scores and exam performance.
- You are allowed to collaborate on homework, but need to write up your own solutions. Plagiarism may lead to administrative sanctions. Late homework is not usually accepted. In fact, solutions may be posted online
- If you miss a homework assignment or an exam due to an illness or another serious cause, then you should inform your college tutor. Your tutor should be able to arrange an extension/exemption for the assignment and also try to reschedule the exam you missed.

Exams

- All modules are examined shortly after the teaching is finished. Modules taught in autumn will be examined in an exam session just before Christmas. Modules taught in spring will be examined in April.

Exams

- All modules are examined shortly after the teaching is finished. Modules taught in autumn will be examined in an exam session just before Christmas. Modules taught in spring will be examined in April.
- There will be just one week for revision of all modules before exams so make sure you focus during the semester! Supplemental (repeat) exams take place in August to examine all students in modules they failed. Students who do not pass either normally or via supplementals get to repeat the year, but each year can only be repeated once (except for medical reasons).

Your college tutor

- Most of you have already been assigned a college tutor. The role of your college tutor is to serve as your representative in college.

Your college tutor

- Most of you have already been assigned a college tutor. The role of your college tutor is to serve as your representative in college.
- You need to talk with your tutor in order to transfer to some other course, justify an exam absence, appeal your results, withdraw from college, and so on. These are all formal procedures that are handled by your tutor (and also the Senior Tutor in cases of urgency).

Your college tutor

- Most of you have already been assigned a college tutor. The role of your college tutor is to serve as your representative in college.
- You need to talk with your tutor in order to transfer to some other course, justify an exam absence, appeal your results, withdraw from college, and so on. These are all formal procedures that are handled by your tutor (and also the Senior Tutor in cases of urgency).
- You should generally inform your tutor of any circumstances that may affect your performance (such as personal, health or other issues).

- Any communication with your tutor is strictly confidential.

Marks at Trinity

Letter grades					
0-29	30-39	40-49	50-59	60-69	70-100
F2	F1	III	II.2	II.1	I

- It is only a very small number of students who graduate with 80% or higher. In fact, all such students get to receive a gold medal.

Marks at Trinity

Letter grades					
0-29	30-39	40-49	50-59	60-69	70-100
F2	F1	III	II.2	II.1	I

- It is only a very small number of students who graduate with 80% or higher. In fact, all such students get to receive a gold medal.
- Most universities impose a II.1 average as one of their minimum entry requirements for admission to a postgraduate degree programme.

- Most universities impose a II.1 average as one of their minimum entry requirements for admission to a postgraduate degree programme.
- In order to pass their exams, freshers are expected to pass on average and have at most two failing scores, each of 35% or above.
- About 10-15% of the freshers fail their annual exams and about 5-10% of the freshers fail their supplemental exams.

Things of interest

- **Prizes.** There are several prizes for Maths students and those are given to the students with the highest rankings in their class.

Things of interest

- **Prizes.** There are several prizes for Maths students and those are given to the students with the highest rankings in their class.
- **Foundation Scholarship.** This is a prestigious award that includes free tuition, accommodation and meals for up to 5 years. It is given to all second-year students who excel in a series of exams.

- **Societies.** There is a long list of societies that you may join including various sports clubs, a Students' Union and also the MathSoc.

First term modules

MA1111 – Linear algebra I . . . . . Vladimir Dotsenko
MA1125 – Single-variable calculus . . . . . Paschalis Karageorgis
ST1251 – Introduction to statistics I . . . . . Fergal Shevlin

First term modules

MA1111 – Linear algebra I . . . . . Vladimir Dotsenko
MA1125 – Single-variable calculus . . . . . Paschalis Karageorgis
ST1251 – Introduction to statistics I . . . . . Fergal Shevlin

- The statistics module is only for the TSM Maths/Economics students.

Main lecture theatres

List of common lecture theatres		
Sal1	Salmon	Hamilton building
Syn2	Synge	Hamilton building
Jol4	Joly	Hamilton building
Max5	Maxwell	Hamilton building
McN3	MacNeil	Hamilton building
EELT		East End Building
LB01		Lloyd building
LB04		Lloyd building
LB08		Lloyd building
ST107		Lloyd building
ST120		Lloyd building
CLLT		Chemistry building
PLLT	Physics	Fitzgerald building

- Synge, Salmon, Maxwell, MacNeil, and Joly are in the Hamilton building.
- EELT is in the basement of 3. LB01, LB04, LB08, ST107, and ST120 are in the Lloyd building/institute, which is next to 11. CLLT is in 5. PLLT is in the Fitzgerald (or Physics) building, which is also next to 11.
